

00600-MV MACHINE BUNDLE

BUNDLE YOUR TOOLING AND GET MORE FOR YOUR MONEY!

The Vortex Cooler is the perfect compliment to the Techniks Shrink Station or Shrink Pro machine. These machines utilize an air blast through the induction head of the Shrink Fit machine. Although this feature is great because the user never has to handle the toolholder while it is hot, the cooling process can take up to 3 minutes before the toolholder is sufficiently cooled. When multiple tools are being heated consecutively it is beneficial to have an off-line cooling option to maximize productivity. With the sub-freezing air temperatures, the Vortex cooler is able to cool tools as quickly as 20-30 seconds creating huge time savings in shrink fit operations.
