

# EXTREME SAW BLADE

- Cuts 4X Faster
- Reduced Heat
- Minimal Burrs

### Ferrous (CERMET)

- CERMET tips in combination with advanced thin kerf design provide outstanding wear and heat resistance.
- Cut faster with 2X-3X the life of standard carbide tipped blades.
- Precision hardened and tensioned flat plates ensure safer and cooler cuts with less sparks and no need for post-cut deburring and clean-up.
- Lowest cost per cut for angle/channel/tubing/plates.
- Designed to cut mild steel, pipe, angle iron and more.
- Use in dedicated metal cutting saws, and dry cut saws.

### Non-Ferrous

- Precision hardened and tensioned flat plates ensure fast, smooth, precise cuts without need of post-cut deburring and clean-up.
- TCG Micro-Grain carbide tips in combination with thin kerf design provide outstanding cut-life.
- Lowest cost per cut for angle/channel/tubing/plates.
- Designed to cut aluminum and other non-ferrous materials.
- Ideal for use in woodworking saws.

UPC	Material	Size	Arbor	Thickness	RPM	Box QTY
